Altus Automation to Begin Offering Automated Solutions for Manufacturers in Western States

Bozeman, Montana (June 1, 2006) – Altus Automation announced today that it will begin offering automated solutions for manufacturing clients located in Montana, Wyoming, Idaho, North Dakota, and South Dakota. The Bozeman based company has particular expertise in industrial control systems, manufacturing execution systems, and plant automation.

The idea for Altus Automation grew out of the consulting business of Computer Compliance Inc., which focuses on the life science industry and complying with the Food and Drug Administration (FDA) mandates for pharmaceutical manufacturing. From this experience Altus Automation was launched with particular expertise in automated control systems that incorporate shop floor control, batch processing, alarm management, ERP, and SCADA.

Implementing automation technology presents a unique opportunity for western states to stay competitive in the marketplace through better quality and lower operating costs over a product's life cycle. Altus Automation plans to provide this solution by first assessing a particular clients needs and then recommending and installing the appropriate manufacturer's automation equipment and software. In addition, Altus will be using quality programs for design, testing, and implementing similar to those required by the FDA.

According to Jim Verzuh, Director of Operations for Altus Automation, "Through working in the life sciences industry, we have developed a quality program for the development of software and compliance services. We are excited to be a true Control Systems Integrator and provide the best solution to the client within an established quality system."

For additional information contact: (Jacob Cook, 406.582.7662, jake@ccionline.com)

Altus Automation allows manufacturers to maximize their investment in production by automating their processes to lower operating costs over the long term.

About Altus Automation

Altus Automation (www.altusautomation.com) is dedicated to being an industry leader in commissioning and qualifying complex control systems. Altus was established to help their clients achieve higher levels of success by helping them to improve quality and productivity. Altus's service and product focus is to provide maximum benefits while minimizing the costs of implementing automation solutions.
